Lean Six Sigma for Business Leaders Online Program

Driving Costs Reduction, Productivity Improvement, and Revenue Growth Through Effective Quality Process Management

OVERVIEW

Many organizations are doing their best to survive safely and economically during a pandemic. The organization depends on its leadership on how to react and to which direction it needs to go. During an economic crisis, cost reduction activities become a knee-jerk reaction. Cash becomes the king again. Tightening of the budget by reducing operational expenses, canceling external engagements, stopping training, and reorganizing the structure to minimize labor costs are everyday actions to free-up cash. These are done in good intention, but when it is poorly planned and executed, it may result in benefits but short-lived and may do more harm than good because of lack of customer focus and decreased service levels.

Lean Six Sigma (LSS) is a strategy that supports the short-term need of the organization to survive safely and to rapidly reduce cost and looking at long-term road to transform into an agile organization for high performance and sustainable growth. Lean Six Sigma is a marriage of two compelling leading-edge methodologies. Lean has been in existence since the post-war era focuses on waste reduction, and Six Sigma started since the late '80s, which focuses on output variation reduction. These two separate methodologies were combined as we enter the 21st century. Many companies subscribed to the LEAN principles and methods. More than 80% of the top 500 Fortune companies in the US are into Lean Six Sigma to drive cost reduction, productivity improvement, and revenue growth through effective quality management.

PROGRAM OBJECTIVES

- Understand how Lean Six Sigma (LSS) can improve business results in organizations
- How to focus on and prioritize initiatives using LSS
- Understand and apply the LSS way on Cost Reduction
- Develop deployment plans of LSS for sustainable growth

WHAT YOU WILL LEARN

- Assessment of the impact of the external environment to cost structure, revenue, and profitability
- Understanding the current business model
- Project selection and definition in the context of cost reduction
- Supplier Input Process Output Customer (SIPOC) Analysis
- Understanding the Voice of the Customer and Critical to Quality
- Value Stream Mapping Analysis
- Process WASTE elimination
- Cost of Poor Quality (COPO)
- Process VARIATION and 5M possible causes
- The DMAIC Concept (Define, Measure, Analyze, Improve, Control)
- Different roles in Lean Six Sigma deployment

KEY BENEFITS

- Broaden leader perspective on implementing cost reduction initiatives
- Strengthen critical thinking and problem-solving skill
- Learn how to put into action a structured approach of problem-solving on an enterprise-level

WHO SHOULD ATTEND

This program is recommended for owners, CEOs, GMs, Managers, Supervisors, and other leaders of companies who would like to institute cost and operational efficiencies in the company. They can be in charge of managing and mitigating the economic impact of the pandemic crisis or exploring different solutions to solve problems around cost reduction, productivity improvement or driving revenue growth for the company.
